

LET'S SAVE THE PLANET

(AXE SAUVER LA PLANETE)

-What we see about environment

The future of the planet is a much more important issue than it was a few years ago because global warming gets worse, which will have a long-term impact on the population. Right now, fauna and flora are in danger. Marine animals swim in the plastic that we throw on the ground or objects which have been badly or not recycled.

-Awareness

“Individuals are increasingly lucid in the face of climate change. The WWF calls this awareness an “ecological wake-up call”. The population is increasingly committed to taking action in the face of pollution. This is collective awareness. Between 2016 and 2020, nature and biodiversity topics increased by 65% in conversations.

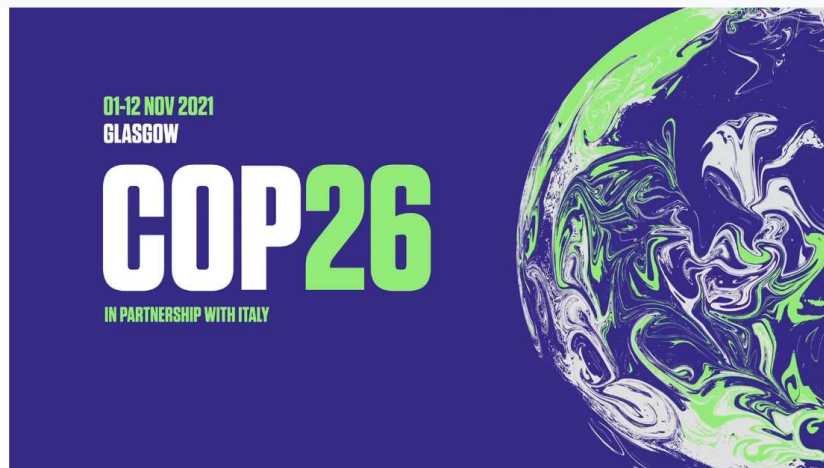

-Change

Negotiators from around the world met in Glasgow for two weeks, in the fall of 2021 at COP26. They found strategies to respond to the deadly problems posed by climate change. They want to limit global warming to 1.5°C.

There are so many solutions to reduce pollution:

- Recycling
- Reducing plastic
- Promoting green transport
- Buying local products
